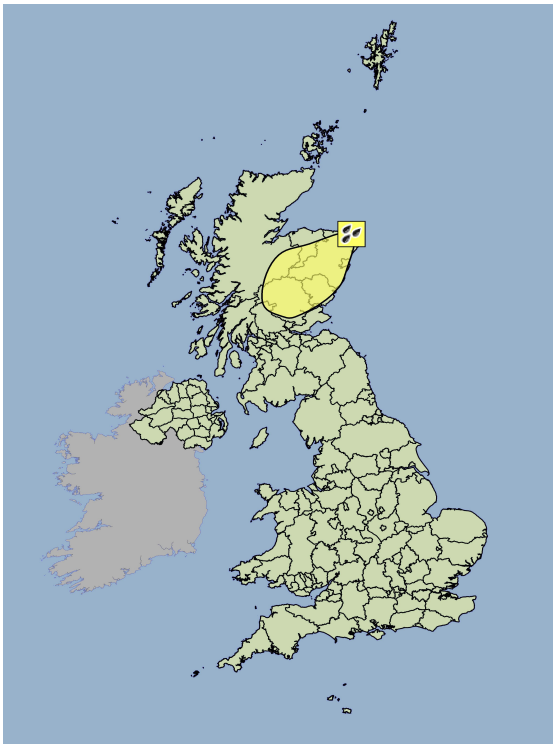
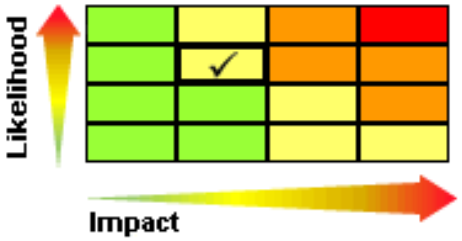
National Severe Weather Warning Service





Chief Forecasters Assessment
A series of weather fronts will move north across Scotland, bringing a fairly persistent spell of rain to parts of eastern Scotland. The developing strong easterly wind will mean that higher ground within this area could see heavy rainfall, with the possibility of some flooding during Saturday.

Additionally some snowfall is expected, mainly above about 300m, with several cm on roads above 450m.

There remains some uncertainty in details, with this warning likely to be updated early on Saturday.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:15 on Sat, 26th Dec 2015** until **22:00 on Sat, 26th Dec 2015**

A band of rain will arrive from the south overnight Friday night into Saturday and is then expected to last until late Saturday evening, before easing in intensity. Before this happens, rain will be persistent, and perhaps heavy at times, mainly across the hillier regions of Aberdeenshire and Angus. Additionally rain will turn to snow over high ground, with several cm accumulating at the level of the highest road passes.

Please be aware of the potential for some localised disruption to travel, either from flooding or from upland snowfall.
